Low-efficiency diuretics usually refer to relatively weak diuretics. These drugs are less effective in promoting the excretion of water and electrolytes. They are usually used to treat mild edema, hypertension, or as an adjunct to other diuretics. The site of action of low-efficiency diuretics is usually the distal tubules and collecting ducts of the kidneys. Due to their weak diuretic effect, low-efficiency diuretics usually do not cause serious electrolyte imbalances and are therefore suitable for long-term use, especially when a mild diuretic effect is required.

The global Low-efficiency Diuretics market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
