The global Low Frequency PEMF-Therapy-Devices market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

PEMF stands for Pulsed Electromagnetic Field and is a revolutionary, invisible, non-invasive treatment method. It is a very effective and simple treatment that works by systemic or local effects on the patient with magnetic fields in pulsed beams. Invisible magnetic field lines penetrate all cells in the body simultaneously, down to the cellular level, reaching parts of the body that cannot be effectively affected by other methods. The Low Frequency PEMF-Therapy-Device uses a combination of alternating magnetic field and low-frequency electrotherapy to act on the subcutaneous tissue and bones of the fracture site, producing magnetic field biological effects and dynamic bioelectric fields respectively, thereby stimulating the chemotaxis and proliferation of bone cells and promoting bone callus. Form, accelerate collagen synthesis and calcium salt deposition, dilute inflammatory mediators; achieve anti-inflammatory, swelling, analgesic, and promote fracture healing effects.
