Low-Loading Trailers are a type of trailer specifically designed to transport over-height, over-wide, or over-weight cargo. This type of trailer is characterized by a low floor height, usually below the ground, to facilitate the loading and unloading of large cargo, such as heavy machinery, construction equipment, engineering vehicles, etc.

Low-Loading Trailers usually adopt special structural designs, such as lowering the body height, strengthening the body structure, etc., to ensure that they have sufficient load-bearing capacity and stability to safely transport overweight or oversized cargo. In addition, low-bed trailers are usually equipped with multi-axle suspension systems and professional hydraulic lifting equipment to facilitate adjustment of body height and angle to adapt to different types of cargo and road conditions.

Low-Loading Trailers are widely used in the heavy transportation industry and are commonly used in engineering construction, mineral mining, energy industry and other fields for transporting various large equipment and machinery.
