## Abstracts

The global Low Melting Point Paraffin Wax market size is predicted to grow from US\$ 1761 million in 2025 to US\$ 2813 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

In 2025, global sales of low-melting-point paraffin wax reached 1.5 million tons, with an average selling price of US\$1,200 per ton. Low-melting-point paraffin wax is a paraffin product with a low melting point (typically between 45°C and 60°C), widely used in cosmetics, pharmaceuticals, food, candle production, coatings, and lubricants. Its main characteristics are a low melting point, ease of processing, and good transparency, gloss, and moisturizing properties, making it widely used in the production of personal care products, candles, and lubricants. Low-melting-point paraffin is obtained from petroleum through refining and dewaxing, and is often used in combination with other additives such as fragrances and pigments.

Upstream raw materials mainly include petroleum, natural gas, and other petrochemical products, while downstream customers are mainly cosmetics companies, pharmaceutical companies, candle manufacturers, and food processing plants. Global total production capacity is approximately 1.7 million tons per year, with an average industry gross profit margin of approximately 25%-30%.

The future lies in the development of environmentally friendly alternatives to low-melting-point paraffin, such as extracting alternative products from renewable resources like vegetable oils, to meet sustainable development requirements. In terms of demand and business opportunities, the low-melting-point paraffin wax market will continue to grow due to the expansion of the cosmetics and personal care products market, as well as the increasing demand for high-quality, low-melting-point paraffin wax from the candle

and food processing industries. It possesses particularly strong market potential in emerging markets and the green products sector.

Low-melting-point paraffin wax, a basic chemical raw material widely used in multiple industries, enjoys a stable and rising market prospect. With the continuous growth of the global cosmetics, pharmaceutical, food, and personal care industries, the demand for low-melting-point paraffin wax is gradually increasing, especially in the cosmetics and personal care sectors. Due to its excellent moisturizing, gloss, and skin affinity, it is widely used in the production of creams, lipsticks, and skin creams. The candle manufacturing industry also continues to drive the demand for low-melting-point paraffin wax, particularly in the festive and high-end candle market, where its ease of processing and superior visual effects make it a key raw material.

Meanwhile, with increasingly stringent global environmental policies, the market's demand for sustainable and environmentally friendly materials is constantly rising, driving the research and development of low-melting-point paraffin wax alternatives. For example, plant oil-based natural waxes and environmentally friendly paraffin wax alternatives are gradually becoming industry focus, bringing new challenges and opportunities to the low-melting-point paraffin wax market. In the future, companies not only need to deepen their presence in traditional application areas but also need to meet consumers' demands for environmental protection and sustainability through innovation in green products.

Furthermore, demand for low-melting-point paraffin wax is also growing in emerging markets such as the Asia-Pacific and Latin America, especially given the upgrading of consumption in cosmetics and personal care products, where the market potential is enormous. Overall, the stable growth of the low-melting-point paraffin wax market, combined with product innovation, will drive its continued penetration across multiple industries, particularly driven by green environmental protection and high-quality requirements, presenting strong market prospects and business opportunities.
