The low-power laser cutting controller is a core control system dedicated to medium and low-power laser cutting equipment. It is mainly used to accurately manage key parameters such as laser output power, motion trajectory, cutting speed, focus position and auxiliary gas. It works in conjunction with lasers, servo motors, CNC systems and other components to achieve efficient and stable cutting operations. It is widely used in small or fine processing scenarios such as metal sheets and non-metallic materials, and has the characteristics of low cost, high integration and easy operation.

As a key intelligent control unit in laser processing equipment, the market demand for low-power laser cutting controllers has continued to expand in recent years with the rapid growth of precision manufacturing, small processing and personalized customization. This controller is mainly used for medium and low-power laser cutting equipment, usually adapted to lasers with power ranging from several hundred watts to one kilowatt, and is widely used in fine cutting of advertising logos, electronic components, instruments and meters, home appliance panels, thin metal sheets and non-metallic materials (such as acrylic, wood, plastic, etc.). Compared with high-power laser systems, low-power controllers pay more attention to cutting accuracy, energy-saving control, system integration and cost control, and are particularly suitable for

small and medium-sized enterprises and light industrial scenarios. In recent years, with the continuous upgrading of domestic control systems and breakthroughs in independent core technologies, domestic brands have continuously improved in functionality, stability and price advantages, and gradually occupied a dominant position in the domestic low-end market.

Market research shows that the global low-power laser cutting controller industry is in a stable growth stage, and the Asian market, especially the Chinese market, is developing most rapidly. The advancement of intelligent manufacturing and Industry 4.0 has made the control system develop in the direction of modularization, networking and intelligence, and software algorithms, interface interaction and system compatibility have become key elements of corporate product competition. At the same time, downstream equipment manufacturers' demand for customized control systems continues to increase, driving controller manufacturers to continue to innovate in hardware integration and software optimization. In the future, the low-power laser cutting controller market will further integrate laser sensing technology, AI intelligent path planning and remote operation and maintenance systems, presenting a competitive landscape that emphasizes high precision, high efficiency, low power consumption and high cost performance. The development of this field will not only drive the overall performance of laser processing equipment to a leap, but also bring broad technological innovation and market expansion space for control system companies.
