A low-voltage air-cooled battery compartment is a device designed for storing and managing low-voltage battery packs. It uses air cooling technology to maintain the battery operating within a suitable temperature range. The battery compartment effectively dissipates heat through natural ventilation or forced air cooling to ensure that the battery pack maintains optimal performance and safety during operation. Low-voltage air-cooled battery compartments usually have a good protection design to prevent external factors such as dust and moisture from affecting the battery. They are suitable for various scenarios that require stable power supply, such as small electric vehicles, energy storage systems, and uninterruptible power supplies (UPS), to ensure the battery life and system reliability.

United States market for Low-pressure Air-cooled Battery Compartment is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
