A boiler is an equipment designed to transfer heat to a fluid (water, natural gas, oil, etc.) until it is suitable for use. On the basis of pressure, there are two types of boilers, namely high pressure and low-pressure boilers and the major difference between the two is the amount of pressure per square inch or pounds per square inch gauge that the boiler produces. A low-pressure boiler exerts a maximum pressure of 160 pounds per square inch for water and 15 pounds per square inch for steam.

The global Low Pressure Boilers market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
