The global Low Pressure Cleaning Truck market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

A low-pressure cleaning vehicle is a special vehicle that uses a low-pressure water pump to spray water onto the road for road cleaning. The advantage of low-pressure cleaning vehicles is that they can save water resources and reduce secondary pollution. They are suitable for cleaning urban roads, squares, parks and other places. The disadvantage of low-pressure cleaning vehicles is that they cannot remove stubborn dirt, and the cleaning effect is not as good as high-pressure cleaning vehicles. A high-pressure cleaning vehicle is a special vehicle that uses high-pressure water jets to wash away dirt on the road. It can also be used to clean pipes, walls, etc. The advantage of a high-pressure cleaning truck is that it can remove all kinds of dirt, has good cleaning effect, and can also perform functions such as fire-fighting and greening watering. The disadvantage of high-pressure cleaning trucks is that they consume a lot of water, causing water waste, and they also need to rely on a stable power supply.
