Low Pressure CO2 Automatic Fire Extinguishing Systems are specialized fire suppression systems designed to quickly and effectively extinguish fires in enclosed spaces. Utilizing carbon dioxide (CO2) as the extinguishing agent, these systems operate at lower pressures to ensure safe and efficient deployment. Upon detection of a fire, the system automatically releases the CO2, displacing oxygen and suffocating the flames. Ideal for use in areas with sensitive equipment or valuable assets, such as data centers, electrical rooms, and engine compartments, these systems provide rapid fire suppression without causing damage to the protected environment.
