Low-pressure mercury germicidal lamps are devices that emit ultraviolet (UV-C) light, typically at a wavelength of 254 nm, which is highly effective at killing or inactivating microorganisms such as bacteria, viruses, and fungi. These lamps work by passing an electric current through low-pressure mercury vapor inside a quartz tube, which produces UV-C radiation. The UV-C light disrupts the DNA or RNA of microorganisms, preventing them from reproducing and causing infections.
