The global Low Resistance PPTC Resettable Fuse market size is predicted to grow from US\$ 108 million in 2025 to US\$ 166 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Low Resistance(Low Rho) Surface Mount PPTC (Polymer Positive Temperature Coefficient) devices provide overcurrent protection for applications where ultra low internal resistance, ultra low voltage drop, and automatic resettable protection are desired. This new series allows a higher hold current device in a smaller factor and lower profile as compared to a standard PPTC. It offers ultra low internal resistance while maintaining the high level electrical characteristics and performances of standard PPTC products. In 2024 the production was 83.3 million units and the average price was \$1.2 per unit.

Low resistance PPTC resettable fuses are protection components that utilize the polymeric positive temperature coefficient characteristic to rapidly increase resistance under overcurrent conditions, automatically interrupting the circuit, and resetting automatically once the temperature returns to normal.
