Abstracts

The global Low-Sludge Phosphating Solution market size is predicted to grow from US$ 288 million in 2025 to US$ 373 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

In 2024, the global production of Low-Sludge Phosphating Solution was approximately 126,000 tons, with an average selling price of about US$2,251 per ton. Single-line capacity was approximately 5,000 tons per year, with an average gross profit margin of about 25%. Low-Sludge Phosphating Solution is a chemical agent used for metal surface treatment, primarily for the pretreatment of steel products before painting, electrophoresis, or powder coating. Its characteristics include minimal precipitate production after treatment, reduced energy consumption, extended bath life, improved production efficiency, and higher quality phosphating film, such as a fine, dense film with good corrosion resistance.

Upstream raw materials mainly include basic chemical products such as film-forming substances and accelerators like phosphoric acid, zinc oxide, nickel nitrate, and manganese nitrate, as well as various additives to adjust pH and performance. Downstream applications broadly cover sectors with high-quality pretreatment requirements for metal parts before coating, primarily including automotive and auto parts manufacturing, appliance casings, aerospace, and shipbuilding. By forming a dense phosphating film, it provides a good foundation for subsequent coating, enhancing coating adhesion and corrosion resistance.

United States market for Low-Sludge Phosphating Solution is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
