The global Low Sodium Refining Agent market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Low sodium refining agent is a flux used in the metal casting industry to remove impurities from molten metal. It is a mixture of various compounds, including chlorides, fluorides, and carbonates, designed to react and dissolve impurities in metals. The use of low sodium refining agents is important in the casting process because impurities can have a negative impact on the quality of the final product. For example, impurities can cause defects such as porosity, shrinkage, and cracks in cast metal. In addition, impurities can affect the mechanical properties of the cast metal, making it more vulnerable and more prone to failure.

United States market for Low Sodium Refining Agent is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
