The global Low Sodium White Corundum Powder market size is predicted to grow from US\$ 216 million in 2025 to US\$ 327 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Low-sodium white corundum micro powder is a fine-grade white fused alumina (white fused aluminum oxide) produced by electric-arc fusion of high-purity alumina followed by crushing, shaping, and tight size classification. Its key value lies in stricter control of alkali impurities—typically defined by low Na₂O levels (often <0.2%, and in premium grades <0.1%)—together with consistent particle-size distribution for precision lapping/polishing, microblasting, wear-resistant coatings, and selected high-performance ceramic/refractory formulations. In 2025, global Low-sodium white corundum micro powder sales reached approximately 85 kilotons, with an average price of 2,600 US\$/Ton.

Demand is primarily driven by downstream industries seeking tighter process consistency and higher material purity. Precision lapping/polishing, microblasting, and surface finishing increasingly favor narrow particle-size distribution and lower-impurity alumina to improve repeatability and surface quality, while advanced ceramics, wear-resistant coatings, and certain dielectric/insulating applications are more sensitive to alkali impurities—making low-Na₂O grades more attractive than standard white fused alumina powders.
