The low temperature annealing furnace is a special equipment for performing low temperature annealing process. Low temperature annealing is a kind of heat treatment process, the main purpose is to eliminate the internal stress in the material at a lower temperature, improve the machining performance of the material, at the same time will not cause the recrystallization of the material. This treatment typically involves heating the material to a temperature slightly below its eutectoid transition temperature, holding it for a period of time, and then slowly cooling it.

The global Low Temperature Annealing Furnace market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
