The global Low Temperature Brine Chillers market size is predicted to grow from US$ 698 million in 2025 to US$ 906 million in 2031; it is expected to grow at a CAGR of 4.5% from 2025 to 2031.

Brine Chillers are widely used in low temperature cooling applications(?0?). The low viscosity and non-volatility of brine make it suitable for cooling projects that ethylene glycol cannot.

The market for low-temperature brine chillers is steadily growing, primarily driven by the widespread adoption of brine cooling technology in industrial refrigeration and manufacturing sectors. The market size is expanding, with increasing sales volumes, and specific uses encompass pharmaceuticals, chemical processing, food processing, and electronics manufacturing, meeting the growing demand for low-temperature cooling solutions. In the future, low-temperature brine chillers are poised for further development, with the emergence of more innovative technologies and high-performance products in response to heightened environmental and energy efficiency requirements to cater to a diverse market.
