Abstracts

The global Low Temperature Grade Hydrogenated Nitrile Rubber market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Low Temperature Grade Hydrogenated Nitrile Rubber is a special type of hydrogenated nitrile rubber with a low glass transition temperature (Tg) and good low temperature properties. It is obtained by hydrogenating nitrile rubber, which reduces the unsaturation of the material and increases its heat and chemical resistance.

Low Temperature Grade Hydrogenated Nitrile Rubber (LT HNBR) is a specialized type of hydrogenated nitrile rubber that is designed to perform well at low temperatures. LT HNBR offers improved flexibility, elasticity, and resistance to low-temperature environments compared to standard HNBR. The demand for LT HNBR is expected to increase in regions with cold climates, such as northern countries or areas with extreme winter conditions. The need for reliable elastomers that can withstand low temperatures and maintain their performance drives the demand for LT HNBR in these regions.
