## Abstracts

The global Low Temperature Laundry Chemicals market size is predicted to grow from US\$ 1651 million in 2025 to US\$ 2617 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

In 2024, global low temperature laundry chemicals production reached approximately 482,174 ton, with an average global market price of around USD 3,500 per ton. A factory gross profit of USD1,050 per ton with 30% gross margin. A single line full machine capacity production is around 15,000 ton per line per year. downstream demand is concentrated in household, commercial laundry services and industrial laundry. A large hotel chain switches from standard detergents to cold-optimized laundry chemicals for white linens and guest laundry. Low-temperature laundry chemicals are specialized cleaning agents, featuring enhanced enzymes, specific surfactants, and powerful oxidizers (like peroxide-based systems) that effectively remove stains, brighten fabrics, and sanitize at cooler water temperatures (often below 40°C/104°F), reducing energy consumption, protecting delicate fabrics, and minimizing microplastic shedding compared to traditional hot-water washing. They overcome the slower kinetics of cold water by using tailored molecules designed to work efficiently in mild conditions.
