The report requires updating with new data and is sent in 48 hours after order is placed.

Low-temperature and low-humidity seed storage cabinets can control the temperature, humidity and other environmental factors of seed storage, creating a low-temperature and low-humidity environment for seed storage. Low temperature conditions can reduce seed respiration and retain organic matter in the seeds. A low-humidity environment can reduce the water content, greatly reduce the proportion of free water, slow down the metabolism of seeds, and is conducive to the preservation of seed nutrients.
