The global Low Temperature Plasma Cleaning Machine market size is predicted to grow from US\$ 459 million in 2025 to US\$ 603 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

The ionization rate of low-temperature plasma is low, the electron temperature is much higher than the ion temperature, and the ion temperature can even be equivalent to room temperature. Therefore, low-temperature plasma is a non-thermal equilibrium plasma. There are a large number of active particles in low-temperature plasma. The active particles produced by ordinary chemical reactions are more diverse and more active, and are more likely to react with the surface of the material they come into contact with, so they are used to modify the surface of the material.

A Low Temperature Plasma Cleaning Machine is an efficient device used for cleaning various material surfaces. It employs low-temperature plasma technology to generate and utilize plasma for removing impurities and contaminants from surfaces. This type of cleaning machine finds extensive use in industries such as semiconductor manufacturing, biomedical, optical devices, and other sectors requiring highly clean surfaces. Its advantages include the ability to clean at low temperatures, reducing material thermal stress and damage while providing efficient cleaning results. With the continuous emphasis on product quality and production efficiency, the demand for Low Temperature Plasma Cleaning Machines is steadily increasing in modern manufacturing industries.
