Low-temperature thermosetting structural adhesive is a one-component, fast-curing modified epoxy adhesive. It is designed specifically for CSP (FBGA) or BGA and is a reworkable underfill. This glue can form a consistent and defect-free underfill layer, effectively reducing the impact caused by the thermal expansion coefficient mismatch between the chip and the substrate or external forces, thereby improving product reliability¹. Low-temperature thermosetting glue usually refers to epoxy resin glue that is heated and cured under lower temperature conditions (such as 60 degrees, 70 degrees, 80 degrees), and is suitable for certain precision electronic components or LED components that are not resistant to high temperatures.

The global Low Temperature Thermosetting Structural Adhesive market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
