The global Low Voltage Wires and Cables market size is predicted to grow from US$ 35870 million in 2025 to US$ 51740 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Wire and cable, as a widely used wire product in the fields of power, electronics, communication, etc., its main function is to transmit electrical (magnetic) energy, information, and achieve the conversion of electromagnetic energy. In a broad sense, wires and cables can also be referred to as cables, while in a narrow sense, cables specifically refer to insulated cables. Insulated cables consist of one or more insulated wire cores, as well as their respective possible cladding layers, total protective layer, and outer protective layer. The main characteristics of low-voltage power lines and cables include: extruding (wrapping) insulation layer outside the conductor, such as overhead insulated cables; Twisted several cores (corresponding to the phase, neutral, and ground wires of the power system), such as overhead insulated cables with two or more cores; Or add a protective layer, such as plastic/rubber sheathed wires and cables. The main process technologies include drawing, twisting, insulation extrusion (wrapping), cabling, armor and protective layer extrusion, etc. The different process combinations of various products have certain differences.

United States market for Low Voltage Wires and Cables is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
