The global LPG Vehicle market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Liquefied petroleum gas vehicles (LPG vehicles) are vehicles that use liquefied petroleum gas (LPG) as fuel. LPG is a clean, efficient alternative fuel, usually consisting of propane and butane, which is converted to liquid form by pressurisation and cooling. LPG vehicles typically use a specially designed fuel system, including a gasifier or injector, to deliver LPG from the fuel tank to the engine to supply fuel. These vehicles often have dual-fuel systems that allow the driver to switch between LPG and petrol for added flexibility and convenience. LPG vehicles are considered an environmentally friendly option because the combustion of LPG produces fewer emissions and it is a relatively inexpensive and widely available fuel.

Data from the Organisation Mondiale d'Automobile (OICA) shows that global car production and sales peaked in 2017 at 97.3 million and 95.89 million units in the last 10 years. The global economic expansion ended in 2018, and an overall decline in the global car market followed. By 2022, global automobiles stood at 81.6 million units. Currently, more than 90% of global automobiles are concentrated in three continents, Asia, Europe and North America, with Asia accounting for 56% of global automobile production, Europe for 20% and North America for 16%. The global automobile main production countries contain China, the United States, Japan, South Korea, Germany, India and Mexico and other countries; of which China is the world's largest automobile largest automobile production countries, accounting for about 32%.
