LPWAN is a new wireless network technology designed for low-power IoT applications. It consists of a star topology, which means that all devices are connected to a central access point or base station, similar to a cell tower in cellular technology. There are a range of LPWAN technologies operating on licensed and unlicensed bands, but typically at the lower end of the scale, such as NB (narrowband)-IoT. The low-power wide area network antenna is a key component in the LPWAN communication system. Through optimized design, it meets the requirements of low power consumption, long-distance transmission and specific application environments, ensuring that IoT devices can connect to the LPWAN network reliably and efficiently.

The global LPWAN Antenna market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
