LTO (Linear Tape Open) tape library is a storage device based on Linear Tape-Open (LTO). LTO technology is an open tape storage technology jointly developed by HP, IBM and Quantum (formerly Certance, acquired by Quantum in 2004). This technology combines the advantages of linear multi-channel and bidirectional tape formats, and improves the capacity and performance of tapes through service systems, hardware data compression, optimized track surfaces and high-efficiency error correction technology. : 'Open-format' means that users can obtain a variety of compatible media storage product resources, thereby improving product compatibility and availability. LTO technology occupies an important position in the field of data storage with its high efficiency, reliability and economy. LTO tape libraries usually contain one or more drives, multiple slots, a barcode reader, and an automatic robot arm for loading tapes. These components work together to achieve automated data backup, recovery and management functions.

The global LTO (Linear Tape Open) Tape Library market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
