## Abstracts

The global Lubricant for Construction Machinery market size is predicted to grow from US\$ 9152 million in 2025 to US\$ 10810 million in 2032; it is expected to grow at a CAGR of 2.4% from 2026 to 2032.

Lubricant is a liquid used in various types of automobiles and mechanical equipment to reduce friction and protect machinery and processed parts. It mainly plays the role of lubrication, auxiliary cooling, rust prevention, cleaning, sealing and buffering. Construction machinery Lubricant refers to special lubricating oil used for large-scale mechanical equipment such as large excavators, loaders, hoisting machinery, bulldozers and road construction machinery.

Favorable factors:

The lubricant industry benefits from the continued growth of market demand. As countries around the world pay more attention to infrastructure construction, such as increased investment in roads, bridges, railways and construction projects, the frequency and intensity of construction machinery use have also increased, directly driving the demand for lubricants. Especially in developing countries, the urbanization process has accelerated, driving the demand for construction machinery and further promoting the development of the lubricant market.

The development of the circular economy provides new development opportunities for the lubricant industry. With the improvement of environmental awareness, more and more companies are beginning to pay attention to the recycling of resources and the treatment of waste. As an important substance for the operation of mechanical equipment, the recycling and reuse of lubricant waste has important environmental

value. By developing new technologies and processes, effective recycling and reuse of lubricant waste can be achieved, reducing environmental pollution, and creating new economic growth points for enterprises. The development of the circular economy will drive the lubricant industry to develop in a more environmentally friendly and sustainable direction.

#### Challenges:

In the lubricant industry, raw material price fluctuations are one of the inevitable challenges. The main raw material for lubricants is oil, and changes in oil prices directly affect the manufacturing cost of lubricants. When international crude oil prices rise, the cost of raw materials for lubricants increases, which brings cost pressure to lubricant manufacturers. This cost increase may force companies to increase product prices, which in turn affects market demand and corporate profitability. Therefore, raw material price fluctuations are a major unfavorable factor in the development of the lubricant industry.

The construction machinery industry is closely related to the macroeconomic cycle. The prosperity of investment-intensive industries such as infrastructure construction, real estate, construction, water conservancy and energy will directly affect the demand for products. If the macro-economy continues to be sluggish or fluctuates greatly in the future, it will have a significant adverse impact on the construction machinery lubricant industry.
