The global Lubricant Viscosity Index Improvers market size is predicted to grow from US\$ 2920 million in 2025 to US\$ 3707 million in 2031; it is expected to grow at a CAGR of 4.1% from 2025 to 2031.

Viscosity Index Improvers (VIIs), also known as Viscosity Modifiers, comprise a class of additives that improve the viscosity-temperature characteristics of the lubricant, making the oil's viscosity more stable as its temperature changes. Lubricant Viscosity Index Improvers is made from polymers, which are long and flexible molecules used in the production of lubricant to reduce lubricant viscosity changes at high and low temperatures. When viscosity index improvers are added to low-viscosity oils, they effectively thicken the oil as temperature increases. This means the lubricating effect of mineral oils can be extended across a wider temperature range.

The whole lubricant viscosity index improvers market is mainly dominated by several suppliers, like Lubrizol, Chevron Oronite, Infineum, Afton Chemical. These manufacturers have mature technology and strong supply chain management, making them owning a certain market share globally.

lubricant viscosity index improvers improve the viscosity-temperature characteristics of the lubricant, making the oil's viscosity more stable as its temperature changes. key market drivers of lubricant viscosity index improvers as follows:

**Growing Automotive Sector:** The demand for high-performance lubricants in the automotive industry is a major driver, as modern engines require lubricants that

maintain performance under extreme conditions. This increases the need for viscosity index improvers to enhance temperature stability.

**Industrial Applications:** The rise in industrial machinery and equipment, which requires specialized lubricants, is boosting the demand for viscosity index improvers. These additives help ensure smooth operation and reduce wear, which is crucial for maintaining efficiency.

**Environmental Regulations:** Stricter environmental regulations are pushing manufacturers to develop lubricants that minimize emissions and improve fuel efficiency. Viscosity index improvers play a critical role in formulating lubricants that meet these regulatory standards.

**Technological Advancements:** Innovations in additive formulations and manufacturing processes are driving the market. Improved viscosity index improvers can provide better performance, leading to increased adoption in various applications.

**Demand for Energy Efficiency:** As industries focus on reducing energy consumption, the need for high-quality lubricants that optimize equipment performance is growing. Viscosity index improvers help lubricants maintain optimal flow properties, contributing to energy savings.
