The low temperature pasteurized yogurt is the yogurt that has been pasteurized at low temperature. In the traditional yogurt production process, high temperature sterilization is usually used to kill the bacteria in it, but this treatment will destroy the nutrients in the milk. The low temperature pasteurization is to heat the milk to 50~60°C, keep it for a certain period of time and then cool it down quickly, which can effectively kill harmful bacteria in the milk, and at the same time retain the nutrients and microbial flora in the milk, making the yogurt more yogurt. It is healthy and delicious, and it is beneficial to enhance human immunity and improve the balance of intestinal flora.
