Lubricated nylon thread is a type of sewing thread made from nylon fibers that have been coated or impregnated with a lubricating substance. This lubrication helps reduce friction, improve the thread's sewability, and enhance its performance during sewing operations. The lubricated coating provides smoother thread passage through fabric and sewing machine components, reducing tangling, knotting, and breakage. Lubricated nylon thread is known for its strength, durability, and ability to withstand high-speed sewing operations. It is commonly used in industrial sewing, upholstery, and other applications that require reliable and efficient stitching.

The global Lubricated Nylon Thread market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
