Lucuma powder is a natural fruit-derived powder produced from the dried pulp of *Pouteria lucuma*, widely used as a natural sweetener and functional ingredient in foods and beverages due to its mild sweetness, caramel-like flavor, and micronutrient content. It is commonly applied in smoothies, dairy alternatives, bakery products, desserts, and nutritional formulations. From a value chain perspective, upstream activities include lucuma fruit cultivation and harvesting, midstream processes focus on pulp separation, drying (spray or freeze drying), milling, and quality control, while downstream demand is driven by food manufacturers, nutraceutical brands, health food companies, and retail ingredient channels. In 2025, the average selling price of lucuma powder is approximately US\$18.5 per kilogram, with global sales volume reaching around 56 thousand tons. The industry maintains a 35%–55% gross margin, supported by premium natural positioning, limited geographic sourcing, and growing demand for clean-label ingredients.
