The global Luggage and Bag Product Testing Services market size is predicted to grow from US\$ 2262 million in 2025 to US\$ 3735 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

Luggage and Bag Product Testing Services refer to technical services provided by third-party testing agencies or in-house corporate laboratories, involving the systematic testing and evaluation of various types of baggage?such as travel suitcases, backpacks, handbags, briefcases, wheeled luggage, and carry-on bags?across aspects including physical performance, chemical safety, functionality, and durability, in accordance with international, national, and industry standards.

The development of testing services for luggage and bags is primarily driven by increasingly stringent global regulations on consumer product safety, heightened supply chain quality control demands from cross-border e-commerce platforms and brands, growing consumer interest in product durability and eco-friendly attributes, and rising technical barriers to international trade. Particularly against the backdrop of tightening regulations in European and North American markets?specifically regarding hazardous chemicals, child product safety, and product traceability?compliance testing has become an indispensable component of the luggage export process. In the future, this service will develop towards greater integration, intelligence, and greenness: the testing items will be expanded to include sustainability indicators such as microplastic release, recyclable material verification, and carbon footprint assessment; the digital platform will enable real-time sharing of testing data, automatic report comparison, and risk warning; at the same time, testing institutions will participate more deeply in the early stages of product development, providing a one-stop solution from material selection to full life-cycle compliance, to support the transformation of the luggage industry towards high

quality, high transparency, and environmental friendliness.
