With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Lugol's Iodine is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Lugol's Iodine market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Lugol's Iodine are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Lugol's Iodine. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Lugol's Iodine market.

Lugol's iodine, also known as Lugol's solution, first made in 1829, is a solution of iodine named after the French physician J.G.A. Lugol. Lugol's iodine solution is often used as an antiseptic and disinfectant, a starch indicator, to replenish iodine deficiency, to protect the thyroid gland from radioactive materials (e.g. 'fallout'), and for emergency disinfection of drinking water. Lugol's was often used in the treatment of gout and was used as a first line treatment for hypothyroidism in adults. It consists of 5% iodine (I₂) and 10% potassium iodide (KI) in 85% distilled water with a total iodine content of 130 mg/mL. Potassium iodide makes the iodine water soluble through the formation of the I₃⁻ ion. It is obtained from chemists and pharmacists who are licensed to prepare and dispense the solution. It can be used as a cell stain, making the cell nuclei more visible and for preserving phytoplankton samples. During colposcopy, Lugol's iodine is applied

to the vagina and cervix. Normal tissue stains brown, while tissue suspicious for cancer does not stain, and appears pale compared to the surrounding tissue. Biopsy of suspicious tissue can then be performed. This is called Schiller's test.
