The global Lux Logger market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A lux meter is a device that measures illuminance (a measure of brightness) and outputs it as numerical data to a computer or other device.

When work is performed in a set area, the brightness of the surrounding area is important. Human evaluation is not suitable for assessing brightness. This is because the human eye is accustomed to the environment, there are large individual differences, and numerical data cannot be obtained.

Since lux meters can measure brightness as objective and quantitative data called 'illuminance,' they can solve the problem of human evaluation.

In addition, since lux meters have a function to send data to a PC, there is no need for a human to manually record the data.

United States market for Lux Logger is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
