LVDT (Linear Variable Differential Transformer) linear position sensors are devices used to measure linear displacement or position changes. They operate on the principle of electromagnetic induction and consist of a primary coil and two secondary coils wound around a core. As the core moves within the sensor body, it induces a voltage change in the secondary coils, which is proportional to the position of the core. LVDT sensors offer accurate and reliable measurements for applications in industries like manufacturing, aerospace, and automation.
