LVLP stands for Low Volume Low Pressure. An LVLP spray gun is a type of spray gun that uses low pressure and volume of air to atomize and spray the paint. The paint is delivered to the spray gun through a hose that is connected to a paint supply pot or a paint cup. LVLP spray guns are designed to be more efficient at transferring paint and reducing overspray than conventional high-pressure spray guns. This efficiency is achieved through the use of a lower air pressure, typically around 10 PSI, and a lower volume of air. The result is a finer atomization of the paint particles, which leads to less overspray and better transfer efficiency. LVLP spray guns are commonly used for automotive refinishing, furniture and cabinet finishing, and industrial application. They can be used for applying a variety of coatings such as primer, paint, and clear coat.

LVLP spray guns come in two types: siphon feed and gravity feed. Siphon feed LVLP spray guns draw the paint from a container located beneath the spray gun, while gravity feed LVLP spray guns hold the paint cup above the gun and use gravity to feed the paint into the gun.
