Lymphoproliferative disorder (LPD) are a group of diseases featured by uncontrolled and/or abnormal production of lymphocytes. LPD may further lead to high number of identical B cells that are found in the body. These problems often occur in individuals with low to very low immunity. T-cell lymphoproliferative disorders can be cured by allogeneic hematopoietic stem cell transplantation (HSCT). It may be also managed with the use of steroids, cyclosporine, A, and etoposide.
