The lyophilized bead production system, also known as the lyophilized bead forming system, can automatically accurately dispense reagents into liquid nitrogen for continuous production of freeze-dried beads. The lyophilized bead dispensing system is an automated equipment specially developed for the dispensing of lyophilized beads, which can help enterprises automatically dispense lyophilized beads into carriers. During the early development and small-scale production of lyophilized beads, the output was not large, and the beads could be manually dispensed. With the increase in production capacity, lyophilized beads customers will switch to automated equipment for automatic beads dispensing.

The global Lyophilized Bead Forming and Dispensing System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
