The global m-Diethylbenzene (MDEB) market size is predicted to grow from US\$ 90.44 million in 2025 to US\$ 123 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

M-diethylbenzene, also known as m-diethylbenzene or 1,3-diethylbenzene, is an important chemical raw material and organic synthesis intermediate. Diethylbenzene appears as a colorless or pale yellow transparent liquid, soluble in organic solvents such as ethanol, ether, and benzene, and has relatively stable chemical properties.

m-Diethylbenzene products are mainly used in the production of light curing initiator DETX. DETX is a highly efficient free radical (II) type photoinitiator with the characteristics of high efficiency, environmental protection, and energy saving. It can be used to initiate the curing system of unsaturated polyester and acrylic monomers, and is widely used in UV coatings, printing inks, wood coatings, adhesives, and other fields. M-Diethylbenzene is an important chemical raw material and organic synthesis intermediate, and there is a certain demand space in the market, especially for high-purity m-Diethylbenzene. With technological breakthroughs, China has achieved domestic production of high-purity m-diethylbenzene, and the process of domestic production of high-purity m-diethylbenzene is constantly accelerating.
