The global M.2 Serial Adapter Card market size is predicted to grow from US\$ 87.36 million in 2025 to US\$ 127 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

In 2025, the global annual shipment volume of M.2 Serial Adapter Cards is projected to be approximately 1.24 million units. Industrial computing, embedded systems, and network security equipment are the main sources of demand, with the Asia-Pacific market accounting for over 45%. The average price of these products, depending on the number of channels, interface type, and industrial grade, ranges from \$65 to \$80 per unit. Models supporting multiple serial ports (RS-232/422/485), isolated designs, or wide temperature specifications can reach up to \$140 per unit. In terms of device usage, a single industrial computer or network device typically uses one M.2 Serial Adapter Card for connecting legacy serial devices; in scenarios involving multiple devices, redundant communication, or protocol isolation (such as rail transit, energy, and avionics ground systems), configuring 2-3 cards is also common. These products are inexpensive but indispensable functional expansion modules in a system; their value lies not in computing power, but in their ability to 'extend the lifespan' of traditional industrial communication ecosystems. A M.2 Serial Adapter Card is a serial communication expansion module based on the M.2 Key B/Key M interface, primarily used in compact industrial motherboards, embedded computers, or specialized equipment to provide standard serial communication capabilities such as RS-232, RS-422, and RS-485. Its core function is not data processing, but rather acting as a protocol bridging node between the I/O expansion layer and industrial field devices. Compared to traditional PCIe/PCI serial cards, M.2 Serial Adapter Cards emphasize miniaturization, low power consumption, and platform compatibility, making them suitable for modern industrial computing architectures that lack standard expansion slots but still require extensive

serial communication. As x86 and ARM industrial platforms continue to evolve towards high integration and slotless designs, M.2 has gradually become the mainstream physical form factor for serial I/O expansion.

United States market for M.2 Serial Adapter Card is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for M.2 Serial Adapter Card is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
