The global MABS Resin market size is predicted to grow from US\$ 465 million in 2025 to US\$ 594 million in 2031; it is expected to grow at a CAGR of 4.1% from 2025 to 2031.

MABS is a copolymer of methyl methacrylate, acrylonitrile, butadiene, styrene, and it has ordinary ABS resin's mechanical properties, but higher impact toughness and transparency than ABS.

MABS resin's unique combination of clarity, impact resistance, and aesthetic appeal makes it highly sought after in consumer electronics and home appliances. The global demand for smartphones, laptops, televisions, and other electronic devices continues to rise, driving the need for materials that can offer both functional and aesthetic qualities. MABS is used in the production of transparent and durable components such as casings, displays, and control panels for these devices, making it an integral part of the growing electronics industry.

The medical industry is also one of the fastest-growing sectors for MABS resin due to its high clarity, sterilizability, and biocompatibility. MABS is commonly used in medical devices such as fluid containers, diagnostic equipment, and housings for medical instruments. With the global increase in healthcare spending, the demand for reliable and safe medical materials is also rising, positioning MABS as a preferred resin for medical applications.

Currently, Korea, Japan, Malaysia and Taiwan are the major production regions of the product. MABS belongs to the family of ABS resin, but owns much higher added-value than common ABS resin.
