The global Machine Finished Kraft Paper market size is predicted to grow from US\$ 1470 million in 2025 to US\$ 1945 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

Machine finished kraft paper, commonly referred to as MF Kraft Paper, is an uncoated kraft paper made primarily from kraft pulp and finished on the paper machine through forming, pressing, drying, calendering or surface finishing processes. It is characterized by balanced surface smoothness, high tensile strength, tear resistance, burst strength and good converting performance. Compared with ordinary kraft paper, MF Kraft Paper offers better surface uniformity and printability; compared with Machine Glazed Kraft Paper, it generally does not emphasize a highly glossy single-side finish. The product is typically supplied in reels or sheets and used in bags, flexible packaging, food and consumer goods packaging, industrial packaging, printed packaging, laminates and other paper-based packaging applications.

In 2025, global machine finished kraft paper production reached approximately 1.5 million tons, with an average global market price is \$1,000 per ton.

Global machine finished kraft paper, also known as MF kraft paper, is an important category of kraft-based packaging paper. It is typically dried through multiple steam-heated cylinders, with the sheet alternately contacting the drying cylinders on both sides, resulting in a more even and relatively smooth surface on both sides. Unlike MG Kraft Paper, which is characterized by one highly glazed side and one rougher reverse side, MF Kraft Paper emphasizes balanced two-sided surface quality, strength, stiffness and high-speed converting performance. It is widely used in packaging bags, wrapping paper, industrial packaging, food outer packaging, coating and lamination base paper,

tray wrapping, reel wrapping, e-commerce packaging and selected plastic-replacement paper packaging applications. Industry materials describe MF drying as a process that gives both sides of the paper a more consistent finish, while high-strength MF kraft grades are commonly used for reel wrapping, tray wrapping and demanding flexible packaging applications.

In terms of industry trends, MF kraft paper is moving toward higher strength at lower grammage, recyclability, coatability, heat-sealability, lamination compatibility and plastic-replacement packaging. Packaging converters are seeking to reduce material weight and plastic content while maintaining tensile strength, tear resistance, stiffness, printability and stable performance on high-speed bag-making or wrapping lines. This supports demand for high-strength MF kraft paper, white MF kraft paper, brown MF kraft paper, food-contact MF kraft paper and functional base papers suitable for water-based barrier coatings, extrusion coating, lamination and heat sealing. Compared with MG kraft paper, MF kraft paper is not mainly valued for one-side gloss; it is better suited to packaging applications that require two-sided consistency, balanced strength, stable reel runnability and efficient downstream converting. The expansion of paper-based flexible packaging is also driving new high-performance kraft paper capacity for sustainable packaging, e-commerce, industrial and flexible-packaging uses.

The main growth drivers come from three areas. First, the global packaging industry is shifting toward paper-based, lower-plastic and recyclable solutions, and MF kraft paper is well positioned as a substitute for selected plastic films, laminated packaging, industrial wrapping materials and conventional packaging papers because of its strength, toughness, printability and converting adaptability. Second, growth in food packaging, e-commerce logistics, industrial packaging, consumer goods packaging and retail paper bags is increasing demand for materials that balance strength, appearance, cost, sustainability and processing efficiency. Third, environmental regulation and circular-economy requirements are strengthening the long-term role of paper-based materials; the EU Packaging and Packaging Waste Regulation requires all packaging to be recyclable by 2030, and Europe's paper recycling rate reached 75.1% in 2024, showing a strong recycling foundation for paper-based packaging in mature systems.
