In 2025, global Machine Safety Light Curtain System production reached approximately 1,670.59 k sets, with an average global market price of around USD680 per set. The gross profit margin of major manufacturers ranges from 34.00% to 46.00%. In 2025, global production capacity reached approximately 2,198.14 k sets.

A Machine Safety Light Curtain System is a photoelectric safety protection device that creates an invisible infrared detection field around hazardous machinery. When the light beam is interrupted by a person or object, the system immediately sends a stop signal to prevent injury and ensure machine safety. It is widely used in automated production lines, robotic workstations, presses, packaging equipment and assembly machinery. The product specifically refers to functional safety light curtain systems and excludes standard photoelectric sensors and industrial light barriers.

The upstream industry includes infrared emitters, photodetectors, microcontrollers, optical components, aluminum housings, cables and safety control electronics. Midstream involves optical alignment, electronic assembly, software programming, functional safety verification and product testing. Downstream applications include automotive manufacturing, electronics assembly, metal processing, packaging, logistics automation and intelligent manufacturing. Market growth is driven by stricter machinery safety regulations and increasing industrial automation.
