A machine tool coolant filter is a specialized filtration device installed in the coolant circulation system of metalworking equipment such as CNC machine tools, machining centers, grinding machines, lathes, and milling machines. It separates and intercepts metal shavings, abrasive particles, sand, sludge, impurities, and some microbial aggregates from the cutting fluid/coolant, maintaining the cleanliness and stability of the coolant. It typically forms a complete machine tool coolant system with the coolant tank, pump, piping, and coolant monitoring system, and is a key component in improving machining accuracy, extending tool life, and reducing maintenance costs. It removes metal shavings and abrasive particles from the coolant, preventing scratches on the workpiece surface and affecting dimensional accuracy; reduces tool wear, extends tool life, and lowers tool costs; prevents coolant deterioration, foul odor, and foaming, extending the coolant's service life; and reduces coolant tank sediment, decreasing tank cleaning frequency and downtime. The average price of this product is approximately US\$1000 per unit, with global sales of approximately 1.3 million units.

United States market for Machine Tool Coolant Filter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
