In the Machine Vision Industry, more often than not, distance becomes the first obstacle anyone experiences during the camera set up. Machine vision engineers always walk a fine line between performance and cost. Their systems must deliver reliably consistent accuracy without being overengineered. The parameters of many applications often clearly define the baseline thresholds for camera, optics, and lighting, which can make it tempting to assume some wriggle room around cabling and connector specifications.

But cables and connectors must not only support the vision system's performance parameters, they must also withstand the physical rigors of the industrial environment.

This report focus on Machine Vision Cables market.
