The global Magnesium Based Desulfurizer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

With the introduction of corresponding national environmental protection policies, the requirements for flue gas treatment in thermal power plants have become increasingly stringent, followed by a variety of desulfurization processes. Magnesium desulfurization technology is attracting more and more attention due to its mature technology, small investment, low operating costs, good environmental benefits, recyclable by-products and certain economic benefits, and has many applications around the world. , among which more than 100 projects have been applied in Japan. 95% of power stations in Taiwan use the magnesium oxide method. It has been applied in the United States, Germany and other places. At present, our country has begun to promote it and has been successfully applied in some areas. Today, when the country vigorously advocates circular economy, only by achieving comprehensive recycling of by-products can we truly protect and care for the environment, thereby making an environmental contribution to the country's sustainable development.
