The global Magnesium Phosphite market size is predicted to grow from US\$ 212 million in 2025 to US\$ 342 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Magnesium phosphite is an inorganic phosphite salt (commonly expressed as $Mg(H_2PO_3)_2$ or related hydrated forms) primarily used as a phosphorus nutrient and plant defense activator in agriculture, as well as a specialty intermediate in corrosion inhibition, water treatment, and certain polymer stabilization formulations; chemically, it provides phosphite (P^{3-}) rather than phosphate (P^{4-}), enabling high solubility and systemic mobility in plants while also offering reducing and chelating behavior in industrial uses. Its supply chain begins upstream with elemental phosphorus or phosphate rock processed into phosphorous acid (H_2PO_3), alongside magnesium sources such as magnesium oxide, magnesium hydroxide, or magnesium carbonate derived from magnesite or seawater brines; in the midstream stage, controlled neutralization and crystallization reactions produce magnesium phosphite in solid powder or liquid concentrate form, followed by drying, milling, and quality grading; downstream, products are formulated into foliar fertilizers, fertigation solutions, or blended corrosion-inhibitor packages and distributed through agrochemical formulators, water-treatment chemical suppliers, and specialty chemical distributors, with demand concentrated in agriculture-intensive regions and manufacturing hubs in China, Europe, and North America, where typical production economics are driven by phosphorus feedstock pricing, magnesium raw-material availability, and regulatory compliance for agrochemical and industrial applications. In 2025, the global magnesium phosphite market records a production volume of approximately 140,000 tons against an estimated installed production capacity of about 175,000 tons per year, with products sold at an average unit price of USD 1,300–1,900 per ton, while leading manufacturers

operating at commercial scale typically achieve gross margins of around 35%.

United States market for Magnesium Phosphite is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Magnesium Phosphite is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
