The global Magnetbesen market size is predicted to grow from US\$ 132 million in 2025 to US\$ 194 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Magnetbesen, also known as Magnetic Sweeper, is a magnetic cleaning tool used to collect ferromagnetic debris such as nails, screws, metal chips, wires, iron filings, staples, and small steel fragments from floors, roads, workshops, warehouses, parking areas, construction sites, and industrial facilities. It usually consists of permanent magnets, aluminum or steel housing, wheels, handles, release mechanisms, and protective structures. Compared with ordinary brooms or manual picking tools, magnetic sweepers improve cleaning efficiency, reduce tire puncture risks, prevent workplace injuries, and support safer maintenance of production and traffic areas. Common types include handheld, push-type, rolling, forklift-mounted, and vehicle-mounted magnetic sweepers. The industrial chain of Magnetbesen includes upstream suppliers of permanent magnets, ferrite magnets, neodymium magnets, aluminum profiles, steel plates, stainless steel parts, rubber wheels, plastic handles, release mechanisms, fasteners, packaging materials, and surface treatment materials. Midstream activities include magnetic circuit design, structural design, housing fabrication, magnet assembly, wheel and handle installation, release mechanism integration, surface finishing, magnetic force testing, durability testing, and final product assembly. Downstream users mainly include factories, warehouses, construction contractors, logistics centers, automotive repair shops, airports, parking lots, municipal maintenance departments, farms, and industrial cleaning service providers. Distribution, customization, replacement parts, maintenance guidance, and safety training support product use and market expansion. In 2025, global Magnetbesen production reached approximately 750,000 units, with an average global market price of around US\$180 per unit. The gross profit margin of major companies in the industry is between 30%-50%. In 2025, the global production capacity of magnetic sweepers was approximately

1,000,000 units.

Market demand is mainly driven by workplace safety management, tire puncture prevention, construction site cleanup, warehouse maintenance, factory floor cleaning, logistics yard management, and municipal maintenance needs. Magnetic sweepers are valued because they can quickly collect ferromagnetic debris that is difficult to remove with ordinary brooms, especially nails, screws, metal chips, wires, and small iron fragments. They are widely used in environments where sharp metal debris may damage tires, injure workers, contaminate production areas, or create operational hazards. Compared with powered cleaning machines, magnetic sweepers are simpler, lower-cost, easier to maintain, and suitable for both small workshops and large outdoor areas. Future product development will focus on stronger magnetic force, lighter structures, wider cleaning width, easier debris release, better wheel durability, corrosion resistance, and adaptation to forklifts or service vehicles. Overall, the market has stable demand, but it remains a practical niche product with moderate growth.
