The Magnetic Ablation Catheter is a Class III medical device specifically designed for cardiac electrophysiological mapping and ablation. Its core functionality relies on integrating tri-axis magnetic sensors and contact force sensing technology into the catheter tip. In 2025, global magnetic ablation catheter production reached approximately 4,658K unit, with an average global market price of around USD 950 per unit. A factory gross profit of USD 247 per unit with 26% gross margin. A single line full machine capacity production is around 110K unit per line per year. downstream demand is concentrated in hospitals, clinics and ambulatory. Magnetic ablation catheter used in complex ventricular tachycardia cases where precise lesion placement is critical and high procedural stability is needed to lower recurrence risk. China, India, Australia, and New Zealand are leading driven by expanding geriatric populations and better healthcare infrastructure.
