The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The Magnetic Ballast is an electrical device that utilizes the principle of electromagnetic induction to limit and stabilize the current of gas discharge lamps. It mainly consists of components such as an iron core and coils. When a gas discharge lamp is connected to the circuit, the magnetic ballast generates an induced electromotive force with a phase opposite to that of the power supply voltage through its internal electromagnetic induction effect, thereby limiting the sharp rise in lamp current and ensuring the normal operation of the lamp under a stable current, extending the lamp's service life. It is widely used in various lighting systems.

Typical products include: Etlin's CF-22-WS-TP, etc.

United States market for Magnetic Ballast is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Magnetic Ballast is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Magnetic Ballast is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
