The global Magnetic Beads based DNA Purification Kits market size is predicted to grow from US\$ 213 million in 2025 to US\$ 351 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

The Magnetic Beads based DNA Purification Kits are designed for rapid and efficient purification of DNA from different samples including tissues, blood cells, bacteria and viruses. The magnetic beads are silica nano-beads with excellent nucleic acid binding properties. They contain super-paramagnetic Fe₃O₄ core and SiOH outer surface modified with SiO₂. They have low, non-specific adsorption achieved by optimizing the size of the nanobeads, the thickness of the SiO₂ layer and the SiOH density. Different kits represent a mixture of nanobeads of different sizes ranging from 80 nm-3 μm that allows the binding of small and large size DNA molecules. In this separation technique, magnetic beads bound to DNA are attracted to a magnetic rack. The DNA is then eluted from the beads using a proprietary buffer system. The purified DNA can be used for many downstream applications including PCR, restriction digestion, Southern blot, sequencing etc.

North America accounted for the largest share of the Magnetic Beads based DNA Purification Kits market in 2022. While Asia Pacific region is expected to grow at the highest CAGR during the forecast period. An increasing number of genomic projects and increasing R&D investments by pharmaceutical & biotechnology companies in this region are some of the major factors supporting the growth of the Asia Pacific Magnetic Bead Purification Kits market.
